

Kayxo Insight Version 2.4

Kayxo Insight is a powerful platform that provides full information management capabilities to different data sources from Microsoft Outlook.

Kayxo Insight accelerates the development of full-featured Office Business Applications (OBAs) inside Microsoft Outlook.

Solutions developed with **Kayxo Insight** provide significant benefits:

- End Users of OBAs built with **Kayxo Insight** can quickly find, link and manipulate information spread across different Line-Of-Business (LOB) systems, without leaving the familiar Microsoft Outlook user interface.
- Organizations obtain higher return on their investments in Microsoft Office, CRMs, ERPs, ECMS and other LOB applications because a proper integration of business data into Microsoft Outlook makes most users in the organization adopt them for their daily tasks.
- Developers can dramatically reduce coding and testing time by using a number of pre-built highly configurable components to access standard data sources and to provide folder structures and data sets. For example, **Kayxo Insight** reduces the development time for Outlook Business Applications accessing data on SQL Server. In case a data provider for a specific data source is not available, the development of a new one, using sample code, documentation, support, and monitoring services from **Kayxo Insight**, is simple and fast.

Key Benefits:

- ✓ Manage any business information in only one well known interface!
- ✓ Out-of-the-box support for Microsoft SQL Server, Oracle, Access, OleDb, Excel and Web Services!
- ✓ Full Integration with Microsoft Outlook advanced search capabilities!
- ✓ Support to Context menu for custom actions, Custom Inspectors and custom .Net Forms.
- ✓ Check free/busy availability from different sources!
- ✓ There is no need to maintain a local copy of LOB data!

What's New in Kayxo Insight 2.4?

- ✓ Support for German Language to allow developers to deploy their **Kayxo Insight** solutions not only in English but also in German environments, getting all messages, tools and features in both languages. Supporting German environments (Microsoft Windows and Outlook) is the first step to provide users an easier and more user-friendly solution interface.
- ✓ The import/export graphical user interface is ready to import and export **Kayxo Insight** folders and their configuration from the **Kayxo Insight** message store to a local PST and vice-versa. This is an external tool and does not run inside Microsoft Outlook.
- ✓ Context Menu support allows users to carry out common tasks with just a couple of clicks instead of "manually" opening, modifying and saving messages.
- ✓ A graphical interface to configure custom .NET forms enables developers to embed custom .NET forms inside Microsoft Outlook. This gives you the power to create any kind of solution based on your needs. Custom .NET inspectors are more flexible and give developers more freedom as compared with customizing Microsoft Outlook forms.
- ✓ An auto-update capability for **Kayxo Insight** applications is now included in the product, allowing users to maintain old configurations and previous solutions and install the new features that are included in the last **Kayxo Insight** version published.
- ✓ Support for Microsoft Windows Vista Service Pack 2 and Outlook Service Pack 2.

Software requisites

Microsoft Outlook 2003 Service Pack 3 or Microsoft Outlook 2007 Service Pack 2
.NET Framework version 2.0
Operating system: Windows XP SP3 or Windows Vista SP2 32 or 64 bits

About Kayxo
