

## What´s New in Kayxo Insight 2.4?

The new version of Kayxo Insight is released. It includes the following new features:

- Support for German language allows deploying **Kayxo Insight** solutions not only in English but also in German environments. The whole user interface of the product (including tools and all messages) displays texts in both languages. Supporting German environments (Microsoft Windows and Microsoft Outlook) is the first step to an easier and more user-friendly solution interface.
- The new graphical user interface of the Import/Export tool enables easier and more user-friendly import and export of **Kayxo Insight** folders and their configuration from the **Kayxo Insight** message store to a local PST and vice-versa. This is an external tool and does not run inside Microsoft Outlook.
- Context Menu support (user defined actions) allows users to carry out common tasks with just a couple of clicks instead of "manually" opening, modifying and saving messages.
- New graphical interface enables configuration of custom .NET forms and embedding them inside Microsoft Outlook. Any required solution can be created. Custom .NET inspectors are more flexible and give developers more freedom as compared with customizing Microsoft Outlook forms.
- An auto-update capability for **Kayxo Insight** applications is now included in the product, allowing users to maintain existing configurations and solutions and install the new features that are included in the last **Kayxo Insight** version published.
- Support for Microsoft Windows Vista Service Pack 2 and Microsoft Outlook Service Pack 2.

Thanks for your interest in our product.
